PROFESSIONAL EXPERIENCE

Frontend Engineer   07/2023 – present
Omniful

- Developed and enhanced user-friendly interfaces for Warehouse Management Systems (WMS) and Order Management Systems (OMS) using React.js and modern JavaScript frameworks, improving operational efficiency for supply chain processes.

- Implemented key features for inventory tracking, management, order processing, and fulfillment, enabling seamless real-time updates and enhanced user experience.

- Designed and built a no-code mobile app builder for Shopify merchants using Remix.js, enabling users to create custom mobile apps through an intuitive drag-and-drop interface and customizable theme options.

PROJECTS

Quora - Clone 🔗
- Developed a full stack knowledge sharing website like Quora using React, Redux, NodeJs, ExpressJS and MongoDB.
- Developed the Login/Signup Page with user authentication.
- Developed the home page where user can scroll through the posts and the Answers page where users can see the questions and provide answers to them.
- Developed the functionality to add a new question or a new post.
- Developed the Backend application with proper data flow.

Asos - Clone 🔗
- An ecommerce platform inspired by Asos built using HTML5, CSS3, JS and Json Server.
- Designed and developed the UI for the landing page, products page, single product page with details like image gallery, price, material details, brand details, etc. and cart and wishlist functionality.
- Developed the search bar functionality where users can search products by category.
- Created and Deployed the mock database.
